ESTABLISHED 1868

MARKET GARDENING AND CHOICE TOMATO SEED

- GROWING

Prize Bushel of Langdon's Northern Adirondack Earliana Tomato.

This is the Earliest, Smoothest, Hardest and Best Extra Early Tomato Ever Grown.

GET SEED FROM THE

NORTH COUNTRY FOR EARLY CROPS

Do you realize how FAR NORTH our tomato seed is grown?

Look on your map north of Malone, four miles from the CANA-DIAN line, where the temperature (occasionally) drops to 25 degrees below zero, and you will see where the seed of the EARLIEST, SMOOTHEST and HARDEST Earliana Tomato is grown in its perfection.

Long winters leaving barely four months free from frost, with generally cool days and many cold nights produce conditions under which tomato plants must hustle to ripen any kind of a crop.

Under these conditions we have perfected our strain of Earliana by SEVENTEEN years of line breeding and selection until it is almost a new variety in smoothness and earliness, but we are selling it under its true name.

LANGDON'S NORTHERN ADIRONDACK EARLIANA has become known the country over as the BEST EXTRA EARLY VARIETY, and almost as an entirely NEW VARIETY, it is so distinctly different and better than the original strain. BUT NOTICE THIS: IF YOU SAVE SEED FROM YOUR OWN CROP PLEASE DON'T BLAME US IF IT DOESN'T KEEP UP TO ITS STANDARD OF EXCELLENCE. Also, be careful what you buy of seedsmen for Langdon's strain.

Having been asked if this strain would stand heavy manuring, we can only say that we are unable to obtain such a quantity of manure up here, but one customer in Rhode Island uses so much that he grows fruit of our EARLIANA which his neighbors will not believe is Earliana, it is so large and smooth. He recently sent us a photograph of one hill which had 206 fruits on one vine.

But on the other hand one of our customers divided his plants with a neighbor who used a lot of horse manure besides a quantity of high grade nitrogenous fertilizer. The original lot grew smooth, well colored fruit, while the plants given the neighbor and manured with coarse horse manure grew rough fruit. Whether the different manure was the cause of different results in the crop, or whether it was pro-

duced by some check in plant growth or by some other unknown cause we do not know. We are only giving you the fact as it came to our observation.

In a test conducted by the Department of Vegetable Gardening, of the Massachusetts Agricultural College, in 1920, our strains of Earliana, Bonny Best, Bacr, and Redhead showed marked superiority in earliness or yield over all others tested. Of course it is not conclusive to judge entirely by ONE YEAR'S results, but one is unusually influenced by such results.

And right here we want to be perfectly fair by saying that we recently received two discouraging reports on our Earliana, one from Michigan and one from Ontario. To the customer in Michigan we returned the price he paid for the seed, and the other we offered, at his request, to replace free of charge.

And now notice this: While making up this copy for the printer this morning, we received the following letter which we quote entire-

"MUSKEGON, MICH., OCT. 3-21. H. P. LANGDON & SON, CONSTABLE, N. Y. DEAR SIRS:—ENCLOSED FIND CHECK FOR \$11.25 FOR WHICH SEND ME TWO OUNCES GRADE NO. 3 SELECTED EARLIANA, AND ALSO ONE OUNCE OF SELECTED REDHEAD. IN 1920 I HAD 1500 PLANTS SET 3½ x 3½, 750 REDHEAD SELECTED, AND 750 EARLIANA NO. 3, AND SOLD \$1040.00 WORTH OF TOMATOES. SHIPPED THE FIRST TO CHICAGO ON AUGUST 1st.

"THIS YEAR, 1921, I SET 650 EARLIANA NO. 3, 650 REDHEAD SELECTED, PLANTS SET 4 x 4, AND SOLD \$930.00 WORTH OF TOMATOES. SEED SOWN MARCH 20th, SET IN THE FIELD MAY 24th, SOLD FIRST TOMATOES JULY 1st, AND HAD ENOUGH TO SHIP TO CHICAGO JULY 10th. THE FIRST 250 SEVEN POUND BASKETS SOLD FOR \$1.25 EACH, WHICH NETTED ME \$1.00 A BASKET. YOURS TRULY, W. F. B."

As the seed sent to our Michigan and Ontario customers was taken directly from the same lots as the one quoted above, we cannot think it or we are to blame for unsatisfactory results obtained by them.

A severe check of plant growth in the cold frame or in the field

A severe check of plant growth in the cold frame or in the field when set will have a great tendency to produce roughness of fruit with Earliana when it will not affect other varieties. One writer in the Market Growers' Journal, Dec. 1, 1921 says:—"I have watched the much despised Ealiana this season under three different methods of handling in the greenhouse, all grown under fair, good conditions and all fine looking plants when ready for the field. The man that had the best equipment of knowledge of the habits of Earliana had an abundance of smooth, ripe tomatoes ready for market July 15th. The next best had tomatoes at the same time, but they were over 50% cripples and a bad looking lot. The third man had tomatoes August 10 and they even at that had a high per centage of crooks and cripples. The first man got \$4.00 per 12-quart climax basket and the last man got 80 cents for the same sized basket.

"The first man planted his tomato seed ten days later than the last man and knew that Earliana must have continued healthy growth from seed to maturity, and can stand very little hardening off in the frames without injury to the crop. G. W. K., Mich."

Liberal liming or a limestone soil tends to produce a smooth, very solid and well colored fruit, but there are some localities in which unknown variations of climatic or soil conditions occasionally produce unfavorable effects on the tomato crop. This we KNOW BE-YOND DISPUTE, having proved it with crops grown from the same lot of seed in different localities. There is a whole lot about smoothness, roughness and sporting of the crop that you and we cannot explain.

We are NOT SEEDSMEN, being only MARKET GARDENERS who offer for sale this seed from a strain of our early tomatoes on which we have worked SEVENTEEN YEARS improving it for our own use, and have been selling it on its merits for FOURTEEN years. If extra earliness of the bulk of the crop combined with large size under favorable conditions mean anything to you, kindly file our little folder away for reference when it comes time to order your next lot of seed. But please order early before the rush comes.

Regarding testimonials, we have heard it said, "They are not much good." But when our customers are so pleased with results obtained by them from our strain of tomato seed that, unasked, they express their satisfaction to us, we think we may be excused for quoting wide-awake, up-to-date truckers, who, certainly would not pay a good round price for seed unless they knew they were getting results they wanted.

Each year we quote only from letters regarding the crop of the

provious year, thus bringing the recommendations right up to date, excepting these first four which we printed a year ago.

"Dec. 29-19—Last year I got 1-4 ounce EARILIANA No. 3 and set 1200 plants out of it, set them on less than 1-2 area, and I sold 5540.09 worth of tomatoes. They bore all summer long, and when the frost hit them I could have picked fifty bushely: the ground was red with them. I picked my drist ripe one or, July 2th, got as high as \$18,29 a had the market to myself for FOUR WEEKS. Don't fail to send the less seed. C. L. C., Ind." (This customer wrote in 1915 "Looks like a lip price" but he has been using EARILIANA No. 3 each year since, nust conclude it pays.)

"Jan. 7-20—Here I am back agoin for some of your good seed. Have the best of linck with the EARILIANA. They are the carriest of sunctings around here. Sold 1909 beyond the Lakellan on order of anything around here. Sold 1909 beyond the Lakellan on order me a sample of Campbell's BONNY BEST, kept them for myself, potted them, and such Bonny Best I never saw. Kindly send me by return mail 1 onnee ADIRONDACK EARILIANA No. 3, 2 ounces CAMPBELL BONNY BEST, 8.7.25 enclosed. I surely hope you will not disappoint me in my EARILIANA this year as I did not get No. 3 last year. Please manage the 1 ounce southow. L. T. B., Ohio."

"Jan. 3-20—Find check enclosed for order \$5.50, I had my usual year. Please manage the 1 ounce southow. L. T. B., Ohio."

Redhead-A New Second Early.

Redhead as grown from our seed by one of our customers in Missouri. He says "I have always liked the Redhead tomato. I think there is no better second early in spite of the claims made for Bonny Best, Baer and others." Also, others write:

"Jan. 17-21—Send me four ounces Redhead tomato seed. Have handled tomatoes for thirty years and never had one that would come up to Redhead in any way, shape or manner. C. H. T., Ohio."

"March 8-21-I wish to say that the Redhead is very fine.

bore heavily for us and the quality is very fine. J. F. S., Pa." "Feb. 7-21—If I could have only one tomato both for extra early and late, it would be the Redhead. It is very much like the Burbank only more vigorous. The Redhead for me EVERY TIME. F. F., Ill."

"Nov. 1-20-I have been buying Redhead from Field and they eertainly are fine. I hope you have and will send the same variety, as I would be sorely disappointed with anything else. E. O. F., Mo." (We obtained our first stock from Field in 1917, and his price the last two years was \$4.00 per ounce. NOTICE OURS on another page.)

This was first grown by us in 1917, and we have been increasing our acreage of it each year since, and need only quote what we wrote at that time.

REDHEAD-This is a new second early which we obtained in the West, and which on this first trial scored many points in earliness ahead of even Baer. The day we made the first picking we got 2½ bushels from Redhead, 1 bushel from Jewell, 1/2 peck from Baer and 10 fruits from Bonny Best, all sowed and set at the same time side by side and all plots about the same size, except that Baer was considerably the largest. It is a strong grower, very profific, the fruit bright red and very smooth, some of the first to set were oval in shape and (Written 1917). weighed 12 to 14 ounces.

A NEW BONNY BEST.

CAMPBELL STRAIN BONNY BEST-We have grown several crops of seed for the Joseph Campbell Co., New Jersey, from stock seed sent us by them. This strain proved to be a few days later than our own, but the foliage is somewhat heavier, with the fruit running larger for that variety. It is a splendid strain, if the few days later in ripening is not a disadvantage, and is worthy to be added to our list. If you grow Bonny Best this strain will surely please you. In ordering state which strain is desired, Campbell's or our own.

BONNY BEST, BAER and JEWEL are the standard second earlies which need no description, the variety best suited to you depending largely on your market, location and soil. We have selected grades of these and our strains are as good as the best, besides being grown in the North.

A NEW MAIN CROPPER.

PURITAN HILL-A customer in Central New York Writes:-"Dec. 11-16-I enclose a few seeds of the PURITAN HILL tomato which has a large, local demand here for both fruit and plants. Will you kindly test it and grow me two or three ounces of seed? It is a valuable tomato, ripening midway between Bonny Best and Stone, and like your Earliana the bulk of the crop ripens almost together. It is

a 20 YEAR SELECTION of Prof. Bailey's IGNOTUM, the fruit being much deeper and more regular than the original."

Of all the main crop variet es we have tried, this new one, or rather new old enc, gives promise of being a winner. The vigor and uniformity of plants was very noticable even in the seed bed as well as in the field. The fruit is beautiful, second to none in color, size and smoothness, with cell walls so thick and hard that makes it an EARLY RED ROCK, leaving little to be desired as a main crop.

As it is also more prolific than Red Rock we shall discontinue growing the latter except for seed supply. We believe it will be distinctly to your advantage to try this well-bred variety.

"Jan. 24-20—PURITAN HILL is the greatest MAIN CROP tomato I have ever planted, and I have grown them all. C. H. T., Ohio."

PURITAN HILL has not done so well with us this season of 1921 as formerly, but we shall not discard it as it has been so good every previous year. We have nice seed for those who want a large, late tomato.

Our tomato seed is all of our OWN GROWING for the trade, (we do no canning), is carefully dried and screened, leaving only the plumpest and best. It is no cheap stuff, although we have had seed of five standard varieties offered us at 40c PER POUND. We could use that to sell again, but are not interested, for your interests and ours are identical.

But, won't you PLEASE order early enough to make a test of our seed before sowing? We have had two or three complaints about seed that SHOULD BE GOOD, from the SAME LOT as was seed sent to customers whose letters are on a previous page, but some variation of temperature, soil condition, or other unknown factor caused disappointment to the purchaser and may do the same for you. For instance, one package was reported to be of very poor germination and was returned to us. Being short of that variety we sowed the seed of that package, which germinated splendidly and made a part of our crop of 1917. Be kind enough to help us and your own interests in this, for, owing to so many different conditions among so many hundreds of our customers, we cannot guarantee anything.

MIMMS CUCUMBER		.15	.25			

This is the cucumber which gave our customers excellent satisfaction till the failure of our $\sec d$ crop for three years.

But we now have a nice lot of seed from selected fruit, grown from pedigree stock of several years' selection. It is a fine table variety, early for so large fruit, ripening white and of very thick flesh and few seeds, fine for sweet pickles. We know of nothing better One customer writes:

"Jan. 21-18—I regret very much that you have no seed of Mimms cucumber to offer. As I am quite a grower of cucumbers I tried this one last year as it was a new one to me. The cucumbers were certainly fine, being fully equal or superior to "Davis" which has always been my standby.—W. N. P., Conn."

Please order early before the rush comes, write your NAME PLAINLY, NAMING SECOND CHOICE IF ANY, and do not send postage stamps except for amounts less than \$1.00. 1c or 2c stamps preferred. We try to fill all oders by first mail. IF NOT PROMPTLY RECEIVED, NOTIFY US.

Although garden seed generally has advanced in prices we are holding ours on the same level although it certainly costs us more.

* ************

Yours for the best in the business,

H. P. LANGDON & SON,

November, 1921.

CONSTABLE, N. Y.
